

Archie's Progress

Archie received his first pair of legs from Dorset Orthopaedics in May 2009.

His progress has been remarkable. With Archie's guts and determination, plus support from the physiotherapists at Woodlands Special School he can now walk with a frame. He can run like a crazy little man with his stumpies, but with the full legs Archie still has to master the knee joints. He gets so frustrated when they collapse beneath him. There is no time to waste - up he gets and tries again.

I can feel that in the near future he will walk unaided. What a joy that will be! I will shout from the rooftops "My boy can walk!".

As Archie's eyesight improves, so does his confidence to walk. We love him dearly.

Thank you for all your support. Please keep raising awareness of meningitis.

Nicky (Mum)
